

One for All Nova College

Upon arriving in the Netherlands, we were greeted by the welcoming staff of the College and the responsible teachers. They accompanied us to our hotel, allowing us a moment to settle in and prepare for the exciting week ahead.

On Tuesday, we began our journey with a delicious buffet breakfast at the College, followed by a train ride to Amsterdam where we embarked on a captivating sightseeing tour. The highlights of the tour included a 3D-printed Bridge and the fascinating NEMO museum. As the day came to a close, we set sail on a boat trip to admire the mesmerizing light show illuminating the canals of Amsterdam.

On Wednesday, we dove into our main task of the week: building solar panels. After receiving a comprehensive introduction to the technology and viewing the solar panels already installed on the College's roof, we set to work gathering materials and constructing the panels and their holders. We meticulously wired and screwed the panels onto the structure, ready for the next day's work.

On Thursday, we completed our project and added the finishing touches, including a custom-cut metal plate bearing the name, logo, and date of the project. In the afternoon, we returned to Amsterdam to explore another building of the NEMO museum.

On our final day, we bid farewell to our Dutch friends and colleagues over breakfast at the College. It was an unforgettable experience and we will treasure the memories forever.
