

Welcome to the second edition of the “**ONE FOR ALL**” newsletter. A lot has happened since the last issue! Our students have been very busy with the design and production of the first remarkable 3D tiles, whilst the teachers have been continuously working behind the scenes, writing the curriculum and teaching resources, as well as organising the international events.

THE CAROUSEL RIDES

Unfortunately, the Covid 19 pandemic yet again managed to throw a slight spanner in the works. Just as the Swedish contingent was meant to start their part of the carousel ride to the Netherlands, the pandemic put a stop to it. However, the visit of Sweden to the Netherlands was successfully completed during the second week of March and the Swedish delegation was able to visit Nova College for the second round of Carousel rides. Both students and teachers were extremely enthused and impressed by their visits to each school and thoroughly enjoyed this unique experience.

The students from Nova College in BBS Soltau

BBS Soltau delegation at Teknikum in Sweden

On the 2nd of December, the students presented their progress and results of the first building block so far, and this was linked via live video feed to each of the participating colleges. They explained their choices of global goals to be printed and the personal relevance and importance. The results of what our students had produced impressed everyone tremendously!

BUILDING BLOCK 2

Virgil Deen (second from the right)

Here the first contact was made with the royal supplier; OpDeVelde Industrie. The question to Virgil Deen from OpDenVelde was: “We have to grow from 50 cm to 3 metre high! How do we do that?” Virgil spoke with the teachers and students and together we came up with a tailor-made system from scratch that met all the requirements. With an ardour for young technical talent, OpDenVelde Industrie shows its involvement in this project by sponsoring building block 2. A 50 cm frame that is stacked to form a 3metre image.

The second building block was started on the 9th of March, with a 3metre statue being set up and this next block being officially opened. The opening ceremony, broadcasted via live video link, was included as part of an ongoing documentary being produced by Arda Nederveen.

A frame of the statue will arrive at each school and then be set up for display as the completion of the building blocks proceed.

During week 8 of this year, Marcel Toussaint visited our partner in the United States of America, Oakton College. In a meeting with President Joianne L. Smith and Vice President Ileo Lott discussions centred around what had been accomplished since the start of the project in 2017, where this project is currently at, and how to extend this project into the future once the initial goals have been achieved.

Moreover, very exciting news reached us a few weeks ago, with the confirmation of a visit to the United States of America and our American Partner Oakton College! This remarkable event will take place in October of this year. Needless to say that everyone is thrilled to be able to take part in such a unique opportunity and a contingent of each school will be participating.
